

Iron on label instructions

- 1.** Ensure the garment you wish to label is completely dry. Pre-heat iron to medium/high, with steam setting turned off. For best results, iron your name label onto the garment's care label (if this is not possible, labels can be applied to any material suitable for ironing).
- 2.** Peel label from backing sheet and place onto care label / garment in the required position. Ensure the printed side of the name label is facing up and that it is placed on a flat surface.
- 3.** Place the reusable protective sheet supplied in your pack over the top of the label. Non-stick baking parchment will work as an alternative.
- 4.** Press the iron firmly down onto the protective sheet for approximately 15-20 seconds. Keep the iron moving during this period to avoid scorching the garment.
- 5.** Allow to cool, then slowly remove the protective sheet. If you find any edges are lifting after application please repeat the above steps, ensuring pressure is applied to the affected areas.
- 6.** Allow at least 24 hours before washing. Do not dry clean.
- 7.** If any labels lift from garment before/during washing, repeat above steps, using a high heat setting and additional firm pressure during application.
